### Tips for making WMA/MP3 and JPEG discs (For CD-R/CD-RW)

● Discs must conform to ISO9660 level 1 or 2 (except for extended formats).

● This unit is compatible with multi-session but if there are a lot of sessions it takes more time for play to start. Keep the number of sessions to a minimum to avoid this.

#### Naming folders and files

At the time of recording, prefix folder and file names with 3-digit numbers in the order you want to play them (this may not work at times).

Files must have the extension:

“.WMA” or “.wma”

“.MP3” or “.mp3”

“.JPG”, “.jpg”, “.JPEG” or “.jpeg”

#### **WMA**

● You cannot play WMA files that are copy protected.

#### **MP3**

● This unit is not compatible with ID3 tags.

● Compatible sampling rate: 8, 11.02, 12, 16, 22.05, 24, 32, 44.1, and 48 kHz

#### **JPEG**

● To view JPEG files on this unit:

– Take them on a digital camera that meets the DCF Standard (Design rule for Camera File system) Version 1.0. Some digital cameras have functions that are not supported by the DCF Standard Version 1.0 like automatic picture rotation which may render a picture unviewable.

– Do not alter the files in any way or save them under a different name.

● This unit cannot display moving pictures, MOTION JPEG and other such formats, still pictures other than JPEG (e.g. TIFF) or play associated sound.
